

NoiseBREAKER

Custom-Moulded Earplugs

*The UK's
leading
custom-
moulded
earplug*

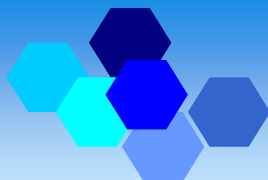

Comfortable **Durable**
Cost-Effective

Individually moulded and fitted

Hearing loss caused by exposure to noise at work continues to be a significant occupational disease. Recent research estimates that 170,000 people in the UK suffer deafness, tinnitus or other ear conditions as a result of exposure to excessive noise at work.

NoiseBREAKER

Custom-Moulded Earplugs

Noise is not a new hazard, it has been a constant threat since the industrial revolution. Too much noise exposure may cause a temporary change in hearing or a temporary ringing in the ears (tinnitus). These short-term problems usually go away within a few minutes or hours after leaving the noise. However repeated exposure to loud noise can lead to permanent damage including incurable hearing loss. Current UK guidance recommends removing hazardous noise from the workplace whenever possible and using hearing protectors in those situations where dangerous noise exposures have not yet been controlled or eliminated.

NoiseBREAKERS® offer a number of important and unique advantages over traditional disposable ear plugs and ear muffs:

Comfort – custom moulded to each individual ear.

Communication - hearing protection AND communication

Durability - made from soft silicone which is virtually indestructible.

Cost Effectiveness - expected life of up to 7 years

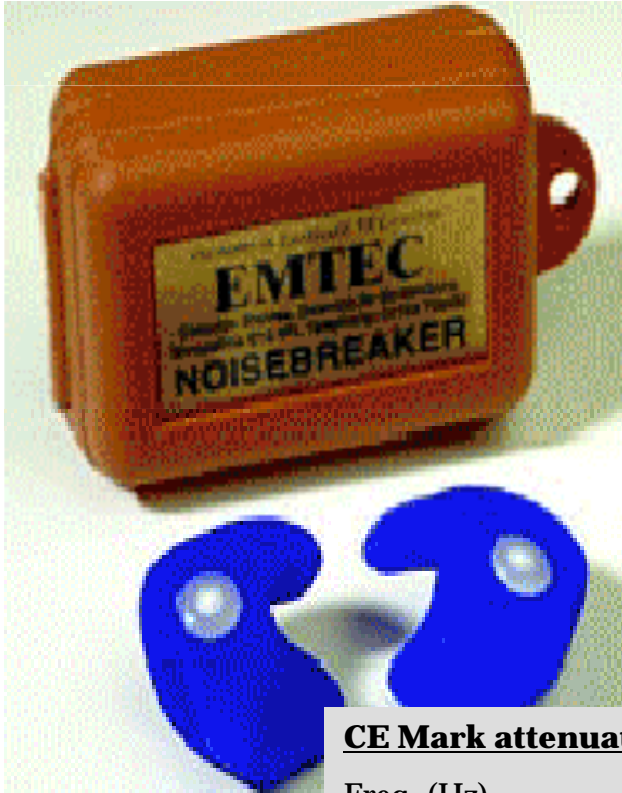

"At British Aerospace we have been using Emtec Noisebreakers for some years now. They provide maximum comfort over long periods, plus the fact that our employees can communicate well, which we find is vital, as communications is of the utmost importance in a noisy area. We view the Noisebreaker, not just as a simple hearing protector, but as an all important part of the individual's safety equipment"

- Phil Carlson, Safety Officer, British Aerospace.

NoiseBREAKER

Custom-Moulded Earplugs

Hearing Protection without the compromises.....

The acoustic filter inside the NoiseBREAKER earplug attenuates all sounds going to the ear but attenuates more in the mid-band range (approximately 1kHz-6kHz) Because of the through channel in the "ear plug" a person is not completely isolated from their surroundings and conversations and warning signals may be heard.

CE Mark attenuation data

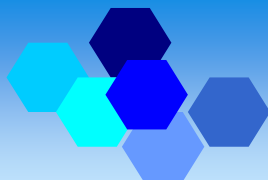

Freq. (Hz)	63	125	250	500	1k	2k	4k	8k
Mean attenuation	13.9	16.1	19	22.7	25	32.2	41.1	36.9

What we do

RPA provide an on-site custom-moulding service to clients throughout the whole of the UK in many different business sectors. The ear-moulding procedure takes less than 10 minutes per person to complete and is safe and hygienic. Each set of unique ear-moulds is then labelled and sent to our laboratory where the finished earplugs are hand-crafted by skilled technicians. The completed set of individual earplugs is returned to the wearer in a protective carry-case which bears the wearer's name and ID number with full fitting and care instructions.

Call us on 0117 9837867 to discuss this on-site service in more detail.
